

The system can work in a stand-alone environment (single-user/computer), or in a networked or enterprise environment (two or more computers) with a server-client structure operating with databases under SQL Server. The possible configurations are:

Stand-alone computer with databases in MSDE

Networked computers sharing the same database in MSDE

Stand-alone computer with databases in SQL

Networked computers sharing the same database in SQL

Introduction - LSS components

The LSS system comes with two modules:

The module that operates under Windows systems: Windows Application.

A second module that operates under Internet Explorer: Web Application.
